

Aung Kaung San

Junior

Front-End Developer

Summary

I work as a Frontend Developer at MMSIT workshop where our team collaboratively builds webbased point-of-sale (POS) systems. Despite encountering numerous challenges with API calls and UI issues, we persevere through collective efforts, involving frontend, backend, and UI teams. This collaborative environment has not only equipped me with valuable knowledge but also enriched my experiences in backend development and user experience design. I am seeking a suitable position that enables me to utilize and fortify the attributes, skills and personal qualities. I have always been an energetic worker and I enjoy overcoming challenges..
